

Ascend Asia Global Equity (USD)

30 September 2025

Our Strategy

Following the 2008 Global Financial Crisis and the 2020 Pandemic, the flood of unprecedented liquidity and low interest rates in markets propelled prices of nearly all assets to record highs. Today, it is increasingly challenging for investors to achieve above-market returns using the “winning formula” of the past decade. The Ascend Asia Global Equity (AGE) strategy is designed for investors who are willing to avoid crowded markets and embrace volatility, to achieve above-market returns over the next decade.

Taking Advantage of the Market Cycle

Just as in nature, there are also seasons in financial markets. Sowing and harvesting in the wrong season can be detrimental to any investment. Rather than trying to accurately predict year-on-year movements, we believe that capturing long-term cycles and trends brings a much greater impact for investors. There have been two important seasons in the past 20 years:

Emerging Market Season (2001 – 2010)

Best ↑ ↓ Worst	EM	Asia	EM	EM	EM	Europe	EM	Japan	EM	EM
	13.8	-5.6	55.8	25.6	34.0	33.7	39.4	-29.2	78.5	18.9

By identifying investments with good fundamentals and investing in them when their valuations are low (sowing) and taking profit when the opportunities mature (harvesting), AGE is designed to help investors avoid the possibility of “missing the season”, as the human tendency to chase past performance can prevent them from enjoying future strong returns.

Historical Performance

Calendar Return, %

Class	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	YTD
A USD	2.84	-2.14	-3.99	-1.22	5.79	4.22	1.65	1.75	3.02	12.13

Since January 2025, AGE has enhanced its investment approach to better capture short- to medium-term trends, while maintaining a focus on long-term growth. With tighter risk management and stronger alignment to upward market movements, the strategy is positioned to respond more effectively to market conditions and deliver more consistent, predictable returns going forward.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Market & Portfolio Developments

Commentary

Financial markets extended their gains in September, supported by growing confidence in an economic soft landing and confirmation of the Federal Reserve’s first rate cut of the year. Financial assets across equities, bonds, and gold advanced. In this backdrop, AGE delivered a gain of 3.02% in September, extending year-to-date returns to 12.13%.

Goldilocks

As we enter the final quarter of 2025, the macro backdrop resembles a “Goldilocks” environment - growth is slowing but not collapsing, inflation is contained, and the Fed is once again cutting rates. Corporate earnings also remain resilient, helped by a broadening AI-investment cycle. This ‘just right’ backdrop is supportive of risk assets so long as a recession is avoided.

Our portfolio is positioned to continue to benefit from this positive trend, while maintaining a balanced regional exposure across Developed and Emerging Markets that will help us to be more resilient in the event of unexpected shocks ahead. Within Emerging Markets, our positions in China – which we prefer due to their more attractive valuations and improving fundamentals – have been contributing positively to overall performance amid growing excitement over the growing AI capabilities of Chinese companies such as Alibaba.

Constructive but Vigilant

We remain constructive but vigilant: taking a positive stance on equities while maintaining diversification and positioning in segments of the market with good risk/reward. Potential risks in terms of an unexpected growth shock or renewed policy volatility from the Trump administration could quickly challenge today’s optimism and which we are monitoring closely (we wrote about the [Three Bears’ to watch out for in our recent market outlook](#)) Maintaining a nimble and prudent approach will be key to navigating the final stretch of 2025.
