

Ascend Asia Global Multi Asset Income (USD)

30 September 2025

Our Strategy

Bond markets experienced a massive reset in 2022 when the US Federal Reserve embarked on the fastest interest rate hiking cycle in modern history, bringing great opportunities for long-term fixed income investors. The Ascend Asia Global Multi Asset Income (AGI) strategy is designed as a choice for investors who want to **receive regular income** but also recognize that the opportunity comes with a more unpredictable landscape going forward. **Beyond traditional markets and asset classes**, AGI aims to generate **multiple streams of truly diversified and solid income**, with potential capital appreciation to prepare for the uncertain world.

Multi asset holding **beyond traditional** fixed income and equity

Generate solid income targeted at **3% above money market** per annum

FVT

Focus on **undervalued opportunities** with **good fundamentals** in sustainable trends

Enhanced Income Solution

Since July 2023, AGI has focused its strategy on taking advantage of the higher interest rate environment. By going beyond common Developed Markets into underappreciated Emerging Markets and Alternative assets, the strategy captures attractive solid income from diversified sources across global markets.

Embrace higher yields in underappreciated markets

Compared to more common Developed Market bonds, Emerging Market and Asia High Yield bonds are higher yielding options, providing solid income with potential upside.

Income potential from Alternative Assets

Non-market related (-0.01 correlation) investment is giving around 10% income in years 2022 and 2023 compared to the average 3.3% average income over the past 13 years.

*Data as of 31 December 2024. Yield figures are updated semiannually.

Discerning The Signals From The Noise

A three-pronged research process to identify signals that point us to **sustainable trends** which are underappreciated by the market, which come with **good fundamentals** and **attractive valuation**, with a higher likelihood of outperforming over the long term.

Fundamental

Study financial and economic data (e.g. GDP, unemployment rate, and inflation rate etc.) that may drive market movement to find opportunities with **good fundamentals** that are underappreciated.

Valuation

Picking the right valuation metrics (e.g. price-to-earnings, price-to-book, EV/EBITDA etc.) to spot **undervalued opportunities** and avoid overpaying for any investment with only good stories.

Trend

Seek inflection points in **sustainable trends** to capture overlooked opportunities and avoid less recognised risks (such as the end of a bond supercycle).

High Level of Active Management

Many actively managed funds underperform because they have a low active share. This happens when a portfolio's holdings are very similar to the referenced benchmark, a practice commonly referred to as 'benchmark hugging'. In contrast, **funds with a high level of active management may have greater potential for outperformance in the long run**, as there is no way any fund can outperform the market if they are investing like the market.

By investing in areas where we have the greatest conviction and applying it to our whole portfolio, we aim to provide better returns over risk through a full market cycle.

Target active share > 80%

Market & Portfolio Developments

Commentary

The Fed's first 25bps rate cut on September 17th provided a supportive tailwind for financial markets, lifting sentiment across both equities and bonds. Fixed income markets posted broad-based gains — with Global Investment Grade bonds rising 0.65% and Asian High Yield up 0.89%. **AGI, our multi-asset income strategy, delivered a 1.92% gain in September, driven by a combination of steady income (from bonds) and capital appreciation (from equity), continuing to outperform its Morningstar peer group.**

Income generation remains attractive today. AGI's average past 3 months' income distribution was 6.14% p.a. In USD, holding steady even as broader interest rates – and money market yields – continue to decline. A notable performance contributor was our allocation to Asian credit, which has delivered strong gains. Which have continued to take profits here and re-allocate to segments offering better income-to-risk potential, ensuring the sustainability of our income.

Today's environment remains favourable for income investors: all-in yields are still historically attractive, and the current "Goldilocks" backdrop of contained inflation and resilient growth provides continued support. That said, an active and dynamic approach is essential to harvest good income while maintaining resilience in the face of unexpected risks.

We continue to find attractive opportunities, such as in agency mortgage-backed-securities, which are backed by government-backed enterprises, as well as select higher-quality 'crossover' bonds (rated BBB to BB) offering attractive yields with resilience.

At its core, AGI aims to deliver good income while managing risk in line with evolving market conditions. By staying selective, flexible, and diversified, the portfolio remains well-positioned to navigate uncertainties and continue delivering reliable income for our investors.

Key Position Highlights

We highlight positions that reflect the strategy's tactical asset allocation view, backed by our study of market patterns and trends over time. As a result, our strategies can be highly differentiated from conventional benchmarks, with the aim of long-term investment success.

Alternative Assets To Provide An Attractive And Differentiated Source of Income

- Alternatives are an essential part of any income strategy going forward. AGI's alternative income provides stable and uncorrelated returns for investors.
- Traditional income investments experienced large price swings and declines in 2022 as the Fed embarked on one of the fastest interest rate increases in recent memory.
- Differentiated alternative income assets such as music royalties and assets with 'toll-booth' investment qualities (that offer significant recurring revenue for their investors) offer the potential to generate stable income independent of traditional equity and bond performance.
- AGI's current focus is on insurance-linked alternative assets due to the high-income potential offered while being highly differentiated from market risks.
